PROJECT ABSTRACT SUBMISSION

COURSE TITLE & CODE : DATA SCIENCE (24AD3107) A.Y. 2026 - 2027

Title of the project		Student Exam Score Predictor	
S. No.	University ID	Name	
1	2420030035	Shiva Ganesh	
2	2420030108	Suraj Gaur	
3	2420030673	M. Jathin Kumar	
Name of the Guide		DR.N.SUNANDA	

Abstract :

The Student Exam Score Predictor is a Python-based machine learning project developed using Visual Studio Code to predict a student's expected examination score. The system uses factors such as previous marks, internal marks, attendance, study hours, and assignment performance.

The student data is processed using Pandas and NumPy, while Scikit-learn is used to train a regression model. The model learns from previous student performance and predicts the expected exam score for a new student.

The system provides a simple way to enter student details and obtain a predicted score. The prediction can help students understand their performance and identify areas that need improvement. Matplotlib can also be used to visualize student performance.

The project demonstrates basic concepts of data preprocessing, machine learning, regression, prediction, and data visualization using Python in VS Code.
